

## Power Climber launches a revolution in traction hoist technology.

*PC3 Relevation™ is the first and only battery-powered traction hoist on market*

**SEATTLE, Wash., September 19, 2022** – Power Climber introduces the **PC3 Relevation™** hoist, the first and only UL-Listed, battery-powered traction hoist on the market.

As suspended access dealers and equipment operators know, power supply-related challenges and problems are the leading cause of lost productivity and downtime, resulting in increased direct costs on jobsites across the country.

The PC3 Relevation frees customers from the power constraints on their jobsites and allows them to work independently of any site power problems or challenges, including:

- No site power available, requiring a rental generator/compressor to power a swing stage
- No connection to site power ready, requiring an electrician and delay
- Low voltage and fluctuating power supply, leading to overheating of the hoist, intermittent operation, and lost productivity
- Troubleshooting visits to a jobsite, or delivery of boost transformers
- Damaged power cables, and lost time coiling and storing between shifts

Based on the proven Power Climber PC3 hoist platform, the Relevation features a portable, rechargeable lithium-ion battery with enough power for three hours of total travel time (up and down combined) at its rated 1000-lb load capacity. A five-amp wall charger recharges the battery to full capacity in less than eight hours. The battery is IP-64 rated and has been tested and approved for operation at temperatures from -4 to 140 °F (-20 to 60 °C).

For more information on how to add the PC3 Relevation hoist to your fleet, please contact your Power Climber sales representative or **call 800-560-2546 in North America or +49 4791 964 070 in EMEA/APAC.**
