

As the season begins to get busier, make sure that all accessory items are fully inspected before using. These items include but may not be limited to the following:

- Power Cords
- Electrical yokes
- Wire Ropes
- Tie backs
- Shackles
- Work cages
- Bosun chairs
- Modular platform components
- Parapet clamps
- Cornice hooks
- Outrigger beams
- Roof dollies

As these items age, they tend to become damaged from normal wear and tear. Accessories may also sustain damage from how they are transported to and from the jobsite. Make sure that your accessory inspections check and replace rusty, damaged or missing hardware. Replace necessary safety and instruction labels. Check each component to the manufacturer's standard or procedure. *If you doubt the safety of any component, throw it out.* **DON'T TAKE A CHANCE ON A LIFE.**
