# PC1 Handles

At the request of our Power Climber dealers, a carrying handle has been developed for the PC1 series hoists. This handle can be installed on every Pocket hoist, ever made.

These carrying handles are mounted to the main frame of the PC1 hoist with two special bolts. The handle also doubles as a holder for the Operator's Manual eliminating the older version of the manual tube. The handle can be used with one or two persons and is very rugged in design. This has become a standard feature on all currently produced PC1 hoists.

If you would like to get some handles for your PC1 hoists, order P/N 8-0251 Manual Tube Handle Kit, which includes all parts required for installation to your hoist, except blue Loctite.
